

CASE STUDY

SHAREPOINT IMPLEMENTATION IN CO-OPERATION WITH MICROSOFT

QUICK FACTS

INDUSTRY:

- Financial services

SELECTION CRITERIA:

- Price
- References
- Certification
- Flexibility
- Comprehensive and up to date knowledge

PLATFORM:

- SharePoint Server 2010 Enterprise

TECHNOLOGY:

- SharePoint
- ASP.NET
- jQuery

CUSTOMER PROFILE

Our Client is a large Insurance company with interest in Life, Property and Investment properties in Hungary. It has several subsidiaries which require a multi- faceted approach.

EXPECTATIONS:

The Client had these expectations relative to SharePoint 2010 implementation:

- Planning and designing a SharePoint and a related SQL Server infrastructure for more than 1000 users.
- Complete configuration of SharePoint services is necessary for the proposed solution
- Supporting the development of a system monitoring and backup solution
- Developing an intranet portal
- The development of implementation-supportive systems

CHALLENGES:

The primary goal of the project was the development of the basic infrastructure of Microsoft SharePoint 2010. Another task was to develop an MS SharePoint based “intranet portal” framework for supporting collaboration. This unique platform provides advanced functionalities to organizations in a cost effective way.

The use of this tool provided an opportunity to develop a central interface, which will become the administrative support of corporate work and the focal point of business operations. This ensures a centralized portal with up-to-date information. As a result, the organization gets to know the advantages of using SharePoint 2010 due to the implementation of two smaller applications, the “Leave and Presence Manager” and the “Meeting Manager”.

HYPERTTEAM'S SOLUTION:

In co-operation with Microsoft experts, HyperTeam developed the Client's SharePoint farm, ensuring the error-free operation of the system.

THE MILESTONES OF THE IMPLEMENTATION WERE THE FOLLOWING:

- **IT INFRASTRUCTURE DEVELOPMENT**

Microsoft Services was involved as a subcontractor in planning the basic infrastructure of the system. As a result of the cooperation, the Client's live and test-development SharePoint farm was implemented. The number of active users in the organization is more than 1000. In addition, we trained personnel which was necessary for the SharePoint 2010 operation.

- **DESIGN FORMING (CREATING A "SHAREPOINT WEBSITE TEMPLATE")**

During the development of the image, several options were made, of which the Client could choose according to its preferences. From the graphical elements a SharePoint template was created, ensuring the consistent appearance of the later sites and applications. This means that the prepared design can not only be used on the sites developed and customized by us but also valid in case additional workspaces need to be inserted at a later date.

- **INTRANET PORTAL DEVELOPMENT**

The SharePoint-based business solutions were developed in the framework of an integrated system, so the main page, the workspaces of the departments and the applications are connected as a whole.

In connection with the website hierarchy, a summary page helps the users to handle the most important announcements on one platform. From the main page every subpage of the client's spaces can be reached, on which the employees of the department can share their documents and handle their tasks jointly during their everyday activities. In the organization, SharePoint responsibilities have been handed out to key individuals who are responsible for the dissemination of data.

- **IMPLEMENTATION-SUPPORTIVE APPLICATIONS**

Leave and Presence Manager
Meeting Manager

ABOUT HYPERTTEAM

HyperTeam provides Management Consulting Services & IT Consulting.

Our knowledgeable consultants deliver measureable results & improve business outcomes. We help organizations to utilize technology to transform & optimize business processes, improve operational performance, manage risk and compliance.

HyperTeam is a Microsoft Certified Partner and ISO 9001:2008 Certified company. Learn more at www.hyperteam.com.

EXPERIENCE

SharePoint system was implemented in close cooperation with our Client, by taking the advantages and opportunities of SharePoint. According to the organization-specific experiences, the Leave and Presence Manager and the Meeting Manager applications could be customized completely to the unique needs of the Client.

After the implementation of the system, consultation opportunities (telephone, email) and technical support is provided to the Client.
